Eval. Notes: The Facilities Management Branch is currently reviewing information concerning the responsible party for continuing remediation at this site. In her last report review, Mary Siedlecki stated, although contaminant concentrations have dropped since the initial remediation began, recent results indicate no significant change in GW quality. Contaminant concentrations remain above GW standards. She is meeting with key personnel to determine future actions at the site, but suspects that if none of the parties involved with the site will consent to development to an Alternate Mechanism in lieu of a Post-Closure Permit, the Section will have no alternative to issuance of a compliance order with penalty to gain compliance.

Report Description

This report provides "all available details" from the Handler module and summarized information from the Waste Activity Monitoring module for the specified RCRA site. Details reported include basic site identification information; handler universe information; source record information including location and mailing address, contact person and address, NAICs, and regulated waste activities. For Biennial Report source records on or after the 2001 BR cycle, additional information reported includes quantity totals (generated, managed, shipped, received), and the top ten GM forms by quantity generated.

Information reported for the RCRA site may be limited by latest historical information and most recent Biennial Report cycle. The data is sorted by the most recent Received Date.

Note: Some data is suppressed if it is null or blank. See the Reports Library documentation in RCRAInfo Help for additional details.
